- ▶ The Investment Objective of Alpine Multiple Opportunities Fund ("the Fund"), formerly known as Alpine Fund Euro Balance, is to generate regular positive returns on a Euro base through investments in a wide range of transferable securities, interest bearing or dividend driven securities in order to achieve an optimum return from capital invested, while reducing investment risk through diversification.
- ▶ The Fund seeks to achieve its Investment Objective through the following Investment Policy:
- ▶ The Fund will invest primarily, directly and/or indirectly, in equity. More than 50% of the total net assets of the Fund will be invested physically (directly or via other collective investment schemes), on an ongoing basis, in stocks or other shares of corporations/companies that are admitted for trading on a stock exchange or listed on another regulated market.
- ▶ The Fund may also invest in fixed income products, which shall include: i) Euro-denominated listed government bonds; and/or ii) Euro-denominated listed corporate bonds; and/or iii) other UCITS funds and/or ETFs where at the time of purchase are meant to invest primarily in fixed income instruments and/or to replicate/track the performance of fixed income indices.

- ▶ The Fund may also invest up to 30% of its Net Asset Value ("NAV") in UCITS, UCITS ETFs and/or UCITS-compliant transferable securities backed by or linked to the performance of commodities or otherwise exposed to the commodities sectors indices.

Risk & Reward Profile

- ▶ The above risk and reward indicator rates this Fund as category 4 meaning that the Fund offers a moderate risk of making a loss but also a moderate chance of making gains. It should be noted that even the lowest category on the indicator does not mean risk free. The rating shown is not guaranteed and may change over time and historical data may not be a reliable indication of the future risk profile of the Fund.
- ▶ The Fund's rating reflects the nature of its investments and the corresponding risks to which the Fund is exposed. These risk factors, which include the risks listed in this section, may affect the value of the Fund's investments or expose the Fund to losses.
- ▶ Currency Risks: The Fund may invest in other currencies. As a result, changes in the rates of exchange between currencies may cause the value of the shares to go up or down.
- ▶ Credit Risks: Bonds or other debt securities held by the Sub-Fund involve credit risk represented by the possibility of default by the issuer. Securities which are subordinated and/or have a lower credit rating are generally considered to have a higher credit risk and a greater possibility of default than more highly rated and/or unsubordinated securities. In the event that any issuer of bonds or other debt securities experiences financial or economic difficulties, this may affect the value of the relevant securities and any amounts paid on such securities. This may in turn affect the NAV per Share.
- ▶ Certain types of assets or securities may be difficult to buy or sell, particularly during adverse market conditions. This may affect the ability to obtain prices for the assets held by a Fund and may therefore prevent the calculation of the NAV per Share and/or the raising of cash to meet redemptions of Investor Shares in the Fund concerned.
- ▶ Any Fund is open to the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events.
- ▶ Charges and Expenses: Charges and expenses will be charged against capital, which may have the effect of constraining capital growth.
- ▶ For more information regarding risks, please see the Risk Factors section in the Fund's Prospectus. The section entitled "Practical Information" below explains how you may obtain a free copy of the Prospectus and other useful information.
